Attention: Mr. Richard M. Helms, Director

Dear Mr. Helms:

I have been working for the past 28 years on a clock that will keep track of perfect time perpetually. It is now completed and I am ready to work with scientists, astronomers and engineers to produce a working model. I feel this clock should be used, if properly controlled, because of the many advantages mankind can derive from it.

A few examples to which this clock is the key:

- a. Deciphers the Aztec Clock, Mexico, Stonehenge, England, and others in Europe.
- b. Can be used in the medical profession to determine timetables for surgery and to easily detect malfunctions of the body.
- c. Space travelers need a more accurate clock that will work properly from space stations or other planets and ties in easily with our present time system on earth.
- d. Will show clearly Einstein's theory of relativity between planets.
- e. Predicting more accurately today than in biblical times earthquakes, weather, recessions and other problems here and abroad.
- f. Can be used to offset the purge and the desire for domination of the world by Russia.

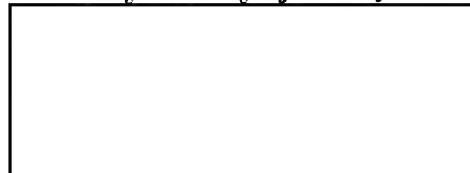

Page 2

I hesitate to have this clock patented now as in time the whole world would have and be able to use its measured funtions to destroy as well as create, although I could well use the monetary benefits that would be derived from it. Instead, I propose that the government of the United States set up a group of scientists, astronomers and engineers, screened by your organization, to work with me in the development and proper use of this clock protecting me with patent rights if at any time the government feels it is alright to do so.

An early reply as to your intentions regarding this proposal would be greatly appreciated.

Very truly yours,

STATOTHR
